## Cutting Scales Worksheet - 3 Axis Mill

## - NOTES, WARNINGS \& CAUTIONS -

It's not "necessary" to cut the scales. You should only cut the scales if shortening them makes sense for your particular installation. DRO PROS recommends favoring X Max when cutting; a longer scale makes mounting the readhead much easier. Sometimes, X Max can be less than X Min - Never cut a scale less than X Min!

## X AXIS

___ X Axis Travel - Measure the full travel of your machine. Remember, power feed stops can limit the overall travel, so make sure and measure without the stops in place.
$\qquad$ Max Length - Measure the length of your table. This is the longest possible scale length which would conveniently fit on your table.

| X Axis Travel ___ $+4^{\prime \prime}=$ | X Min |
| :--- | :--- |
| Max Length___ $-3 / 4^{\prime \prime}=\quad$ X Max |  |

$\underset{\times}{\perp}$
$\underset{\times}{\underset{X}{㐅}}$

## Y AXIS

$\qquad$ Y Axis Travel - Measure the full travel of your machine.
___ Max Length - Measure the longest possible scale length which would conveniently fit on the base of your machine.
Y Axis Travel___ $+4^{\prime \prime}=\ldots \quad$ Y Min
Max Length $\qquad$ $-3 / 4^{\prime \prime}=$ $\qquad$ Y Max

Z AXIS
___ Z Axis Travel - Measure the full travel of the knee or column, depending on machine type.
___ Max Length - Measure the longest possible scale length which would conveniently fit on the knee of your machine.
Z Axis Travel___ $+4^{\prime \prime}=\ldots \quad$ Z Min
Max Length $\qquad$ $-3 / 4^{\prime \prime}=$ $\qquad$ Z Max
